Impulso global para acceso abierto: nuevas leyes y políticas

Es ley el acceso libre a la información científica

El Senado de la Nación aprobó por unanimidad la norma que obliga a las instituciones científicas del país a facilitar el acceso abierto a las investigaciones.

EUROPEAN COMMISSION

PRESS RELEASE

Brussels, 17 July 2012

Scientific data: open access to research results will boost Europe's innovation capacity

The European Commission today outlined measures to improve access to scientific information produced in Europe. Broader and more rapid access to scientific papers and data will make it easier for researchers and businesses to build on the findings of publicly funded research. This will boost Europe's innovation capacity and

G8 Science Ministers Statement

4. Expanding Access to Scientific Research Results

We recognise that effective global scientific research and public understanding of science and commercial innovation by enterprises is supported by free and rapid public access to published, publicly funded research. The generation, sharing and exploitation of scientific knowledge are integral to the creation of wealth and the enhancement of our quality of life. We recognise that G8 nations have an important opportunity and responsibility to promote policies that increase access to the results of publicly funded research results to spur scientific discovery, enable better international collaboration and coordination of research, enhance the engagement of society and help support economic prosperity.

i. We endorse the principle that increasing access to the peer-reviewed, published results of publicly funded published research will accelerate research, drive innovation, and benefit the economy.

ii. We recognise the importance of peer review and the valuable role played by publishers, including Learned Societies. Increasing free access to peer-reviewed, published research results will require sustainable solutions.

Expanding Public Access to the Results of Federally Funded Research

The Obama Administration is committed to the proposition that citizens deserve easy access to the results of the scientific research their tax dollars have paid for. That's why, in a policy memorandum, Director John Holdren has directed Federal agencies with more than \$100M in R&D to make the published results of federally funded research freely available to the public. The administration is also considering legislation to require the publication and requiring researchers to better account for and manage the digital data from their federally funded scientific research. OSTP has been looking into this issue for some time, so
